

Controlled flexibility

Research references

Two published studies cited in the Controlled flexibility chapter. Use the links below to view each publication record and find publisher access options.

01 / BENDING AND FATIGUE

De-Deus et al. (2017)

Blue Thermomechanical Treatment Optimizes Fatigue Resistance and Flexibility of the Reciproc Files

Journal of Endodontics

DOI: 10.1016/j.joen.2016.10.039

[View publication: pubmed.ncbi.nlm.nih.gov/28131415/](https://pubmed.ncbi.nlm.nih.gov/28131415/)

02 / TORSIONAL BEHAVIOUR

Torsional behaviour of Reciproc and Reciproc blue instruments associated with their martensitic transformation temperatures

2019 publication

PubMed ID: 31306497

[View publication: pubmed.ncbi.nlm.nih.gov/31306497/](https://pubmed.ncbi.nlm.nih.gov/31306497/)

Evidence context

These studies concern other instruments, not FlexION. They do not establish a FlexION-specific safety claim. This is a reference sheet, not a reproduction of the journal articles; publisher access terms apply.
